### About Syncromune<sup>®</sup>

Syncromune is a privately held, clinical-stage biopharmaceutical company dedicated to the development of an *in situ* platform therapy optimized for metastatic solid tumor cancers that aims to achieve high response rates with potentially improved survival. The company is currently developing SYNC-T, a novel and personalized platform immunotherapy that combines partial tumor oncolysis and a multi-target biologic drug. The SYNC-T combination approach is designed to target multiple mechanisms of cancer, promoting *in situ* immune activation while battling immune suppression. The goal is to activate T cells, enabling the immune system to recognize and attack cancer throughout the body and defend with immune memory. Our lead candidate, SV-102 for mCRPC, is currently moving into Phase 2 trials. Syncromune is headquartered in Fort Lauderdale, FL, and West Des Moines, IA, USA. For more information, please visit [www.syncromune.com](http://www.syncromune.com).

### About SYNC-T<sup>®</sup>

SYNC-T is a personalized *in situ* platform therapy designed to activate T cells and stimulate the immune system to treat metastatic solid tumors. SYNC-T utilizes a combination approach of *in situ* vaccination via device-induced partial tumor oncolysis and intratumoral infusion of a multi-target biologic drug. This methodology is designed to provide both immune stimulation and blockage of immune suppression, simultaneously targeting numerous cancer mechanisms. The therapy aims to synchronize the timing and location of tumor antigen release with the functional activation of immune cells. The dual mechanism empowers the activation and proliferation of T cells to elicit a systemic anti-tumor response and defend with immune memory.
